

Generic Radiology Report From Competitors

Patient Name: John Doe

Date of Birth: 02/11/1980

Medical Record Number: 123456

Date of MRI: 06/09/2024

Date of Report: 06/12/2024

Clinical History:

Patient presents with shoulder pain and limited range of motion.

Findings:

1. **Bone Marrow Edema:** There is nonspecific marrow edema observed in the humeral head. This finding is nonspecific. Clinical correlation is recommended.
2. **Rotator Cuff Tendons:** There is evidence of mild tendinosis of the supraspinatus tendon. No full-thickness tear is noted. The remaining rotator cuff tendons, including the infraspinatus, teres minor, and subscapularis tendons, appear intact.
3. **Labrum:** The glenoid labrum is unremarkable.
4. **Biceps Tendon:** The biceps tendon is within normal limits.
5. **Glenohumeral Joint:** The joint space is preserved. No significant joint effusion is observed.
6. **Acromioclavicular Joint:** There are mild degenerative changes noted in the acromioclavicular joint.
7. **Soft Tissues:** The visualized soft tissues are unremarkable.

Impression:

1. Nonspecific marrow edema in the humeral head. Recommend clinical correlation and follow-up imaging.
2. Mild tendinosis of the supraspinatus tendon.

The above report is the standard radiology report. It is probably similar to the kind of report you received from your scans.
